## Maximize School Safety & Compliance

### » Compliance with the Law

New Federal 911 calling laws require public and private sector organizations to furnish an internally provided Dispatchable Location to the Public Safety Answering Point (PSAP) when a 911 call is placed. Relaying a general street address is no longer adequate. Information that includes the building floor and room or other relevant location information must be provided to assist first responders. Using IP-PBX Multi-Line Telephone Systems, GPS, geo-mapping, and geo-fencing technology, powerful location discovery and notification capabilities identify a 911 caller location anywhere in your building or campus. 911 HALO supports 911 calling compliance with Kari's Law & RAY BAUM's ACT and supports the emerging Alyssa's Law.

### » Maximizes Current Investment in Safety & Security

911 HALO is an affordable, powerful notification and security management platform that integrates with your existing PBX phone, door lock, video surveillance, and other systems. Using browser-based software that doesn't require an app, you'll be able to monitor and communicate with responders during any emergency or crisis, including 911 Calls, Shelter in Place, Medical Emergencies, Active Shooters, Lock Downs, or Silent Alarms.

### » Be the first to know

The 911 HALO platform delivers immediate communication for 911 emergencies to the PSAP, school-requested Police Mobile Data Terminals, and the school and district officials listed in your School Security Plan. Precise caller location identification is connected to building controls for your existing door lock and surveillance systems and a detailed notification system, so you know when a 911 request has been made. 911 HALO pinpoints an emergency's geographical location while concurrently notifying local authorities and on-site school personnel, providing instant access to the callers' detailed area map and your school's floor plan. Also, directing first responders to the parking entrance closest to the emergency location.

### » In the Moment Communications Saves Time

911 HALO provides Real-Time Situational Awareness with two-way communication between first responders and school officials across multiple platforms without requiring an app on mobile devices. Our connected building platform provides emergency response teams with the bi-directional communication and controls needed to successfully manage a crisis and save valuable time by providing total situational awareness and in-the-moment communication.

#### Kari's Law

System must allow direct access to 911 without any access codes.

System must provide on-site notification that the call has occurred and from what station.

#### RAY BAUM'S Act

Any call to 9-1-1 must deliver a dispatchable location to the PSAP/ECC (Public Safety Answering Point/Emergency Communications Center)

Any call to 9-1-1 must deliver a dispatchable location to on-site personnel.

#### Alyssa's Law

\*All public elementary and secondary schools to install either panic alarms or alternative emergency mechanisms approved by The Department of Education.

\* Sate law in NJ, FL, NY — Enacting in other states now
